How could humans and robots interact in a smarter way?

The restoration problem

Waiter! Waiter! Where is my food?

- Bringing plates around creates chaos and stress
- Human error can destroy the room's atmosphere
- Impatient people keep asking the waiter if their food is ready yet.

The restoration problem

Waiter! Waiter! Where is my food?

Introducing bonded

One last thing...

Big Data == Big Possibilities

Unlock new use cases!

- Healthcare: Patient fall detection, patient navigation assistance —> save valuable staff time
- Catering: Seating a customer without staff assistance
- Retail: Targeted product recommendations through customer's voice print
