

Sustainable Garden

TEAM OVERVIEW

Luisa Porzio

UX/UI and Frontend
developer

Samuele Viola

Backend developer

Sara Lammouchi

Project Manager and data
engineer

THE PROBLEM

The problem stems from the need of a tool showing environmental and sustainability data in a more transparent and accessible way.

MISSION AND GOALS

Making sustainable and environmental data easy to ACCESS, easy to UNDERSTAND and FUN to interact with

OUR SOLUTION

- **TRANSPARENT APPROACH:** the user can see also when the data show negative or worsened environmental metrics.
- **ACCESSIBLE APPROACH:** data are showed with clear and explained visualizations. Moreover, an LLM powered chatbot can answer to users' questions.
- **FUN APPROACH:** users can interact with the sustainable garden and plant their own flowers. If the company environmental metrics are good flowers grow, otherwise flowers whiter.
