- **Azat Sabitov: Automation**
- **Rezart Ruci: Front-end**
- **Thomas Vigato: Back-end**
- **Vache Burdiashvili: Back-end**

Project Presentation

What makes us stand out ?

- We also believed that the best way to encourage employees would be through a reward system.
- But how true is this? Sometimes games and challenges get boring, we don't want to get involved and worry about extra things.

Lets be honest

- We are information engineers.
We don't know about games and fun. Only Data. Lots of Data.
We love data ❤️
- We also don't want to work, and I believe you don't either.

- We have to work, but who works even harder.
- If only we could know how much our habits affect our environment, without having to be included in all these statistics.

**Now let's be
Real**

WE GOT YOU COVERED

WITH

VERDES  AT

What's the BIG IDEA ?

- We plan and present an idea for an application called **VERDES****AT**
- Data management *seamlessly*, without directly ~~forcing~~ employees to change their methods
- The idea is for someone to change for themselves, and not by telling them what to do
- To adapt to the habits that help us and our environment.

THE BIG IDEA

An application on their phones keeps track of their carbon dioxide emissions, keeping them within a threshold (set by the company). At the end of the day, a notification comes to their phones letting them know if they are within this "limit", or if they are outside it. In the first case, encouragement is given, while in the second case, suggestions on how they can improve their consumption.

THE IDEA
